RECENT PROJECTS

Mixr [React/Redux, Rails]   Live | Github
Single-page Webapp inspired by Tumblr.
- Leveraged ActiveRecord associations between users to personalize content feed based on "follows"
- Implemented modal dialog windows through React-Modal library to provide a seamless user experience
- Improved scalability and server response time by storing user content on cloud through AWS

Fireworks [JavaScript]   Live | Github
Quirky, animated soundboard built purely on JavaScript
- Integrated HTML5 canvas to produce dynamic animations
- Incorporated the Howler.js library to provide each animation with a distinct sound

Don't Get Lost [React Native, Rails]   Live | Github
Mobile App designed to keep track of your friends' locations
- Utilized Asynchronous Storage to create persistent user login, eliminating the need for users to re-login
- Incorporated geolocation by integrating Airbnb's AirMapView and React Native's built-in geolocation API

WORK HISTORY

Software Intern
Backend Generalist at LimeBike / November 2017– March 2018
- Restructured core models to reduce class coupling and data redundancy
- Integrated third-party APIs such as Twilio and AT&T to keep track of current internet sessions for bicycles
- Implemented background jobs to regularly update and maintain production database
- Practiced Test Driven Development through Rspec unit testing

Property Manager
Managed daily operations of 14-unit apartment / 2013 – 2017
- Oversaw seismic retrofit remodeling project to satisfy compliance with city ordinances
- Achieved >95% occupancy over the past 2 years through tenant screening and resolving tenant concerns and complaints
