RECENT PROJECTS

Mixr [React/Redux, Rails]   Live | Github
Single-page Webapp inspired by Tumblr.

- Leveraged ActiveRecord associations between users to personalize content feed based on "follows"
- Implemented modal dialog windows through React-Modal library to provide a seamless user experience
- Improved scalability and server response time by storing user content on cloud through AWS

Fireworks [JavaScript]   Live | Github
Quirky, animated soundboard built purely on JavaScript

- Integrated HTML5 canvas to produce dynamic animations
- Incorporated the Howler.js library to provide each animation a distinct sound

Don't Get Lost [React Native, Rails]   Live | Github
Mobile App designed to keep track of your friends' locations

- Utilized Asynchronous Storage to create persistent user login, eliminating the need for users to re-login
- Incorporated geolocation by integrating Airbnb's AirMapView and React Native's built-in geolocation API
- Implemented responsive web design by creating components that adjust to the device's screen size
- Established an effective Git workflow process, with peer code review

---

WORK HISTORY

Property Manager
Managed daily operations of 14-unit apartment / 2013 – Present

- Selected and fostered strong working relations with contractors to perform repairs and maintenance
- Oversaw seismic retrofit remodeling project to satisfy compliance with city ordinances
